UI/UX & PRODUCT

AI can design a screen in ten seconds. That's exactly why you still need a designer.

Philip Nosike · 6 min read

01

Making screens is no longer the hard part

This is the shift nobody really talks about. AI didn’t make design easy. It made making things easy. You can now produce a hundred good-looking screens before lunch.

UI/UX & PRODUCT

When everyone can make something that looks finished, deciding what it should be becomes the real work.

What consulting looks like now

1. Looking at what a team has generated and saying, kindly but clearly, what to keep and what to throw away.

2. Finding the one flow that decides whether people stay, and making that flow excellent before anything else.

3. Turning a pile of screens into a small system, so the product still feels like one product six months from now.

4. Bringing the context a prompt can't: who your users are, what they've been burned by, and how they really pay, share and sign up.

02

AI isn’t the enemy

I use it every day. It helps me explore faster, write rough copy, and test ideas I’d never have had time for. But a tool that can make anything still needs someone to decide what’s worth making. That’s the job now.
