UI/UX & PRODUCT

Nobody told me the hardest part of designing a savings app would be fear

Philip Nosike · 6 min read

01

People had heard every promise already

Almost everyone we spoke to had a version of that story. A group that collapsed. An app that suddenly froze withdrawals. A friend who “would pay back next month.” Big words like “secure” and “guaranteed” didn’t calm anyone down.

UI/UX & PRODUCT

Trust isn’t something you say. It’s something people can check, again and again, without asking you.

So we stopped promising and started showing

1. Put the boring details right where people look: when the money unlocks, and what happens if you need it early.

2. Let group members see who has paid this round, so nobody has to chase anyone.

3. Show the name on the receiving account before the PIN, so there's no doubt about where money is going.

02

What I took away

Next time you start a fintech project, ask people about money they've lost, not just money they want to save. Their answers will show you exactly which screens need to work hardest.
